Preface

The development of human history is essentially a history of wealth evolution.

- The Age of Agriculture: Land Creates Wealth
- The Industrial Age: Machines Create Wealth
- The Internet Era: Information Creates Wealth

Today, the world is entering a new era: **the era of digital wealth.**

1、 The continuation and change of the wealth system

Over the past few decades, the way wealth management is managed has not fundamentally changed.

People still manage their wealth through various decentralized systems, such as:

- **Bank accounts**
- **Securities account**
- **Payment account**
- **Insurance system**
- **Real estate assets**
- **Gold versus physical assets**
- **Corporate equity structure**

These systems form the foundational framework of traditional wealth management.

2、 Changes brought by the digital age

However, with the development of artificial intelligence, digital identity,

global networks, and the digital economy, wealth is undergoing a structural transformation.

In the future, wealth will no longer be just a concept of "money" but will gradually expand into a multidimensional system, including:

- **Identity**
- **Data**
- **Resources**
- **Interests**
- **Cognition**
- **Connection**
- **Influence**
- **Digital assets**

These values are accelerating their digitization and gradually forming entirely new wealth structures.

3、 SPARK's core judgment

SPARK believes that in the next twenty years, the greatest opportunity will not lie in a single industry, but in **the restructuring of the wealth system itself.**

4、 SPARK direction

Based on this assessment, SPARK decided to build: a **global digital wealth ecosystem.**

Through Spark One digital wealth accounts, the following elements are connected in a unified way:

- **Wealth**
- **Identity**
- **Interests**
- **Growth**

SPARK UNION CAPITAL INC.

- **Resources**
- **The future**

SPARK's goal is to help users transition from traditional wealth systems to a unified structure in the digital wealth era.

Allowing everyone to enter and participate in this new era:

A new era of digital wealth.

Chapter 1: About SPARK UNION CAPITAL INC.

1、 Company Profile

SPARK UNION CAPITAL INC. is an international company focused on smart asset management, fintech innovation, and building a global wealth ecosystem.

The company adheres to the development philosophy of "Technology-driven value, intelligence creates the future," actively exploring the integration of artificial intelligence, big data analytics, and global asset management, driving the wealth management industry toward greater intelligence, digitalization, and globalization.

2、 Company Development History

In 2020, SPARK UNION CAPITAL INC. was officially established. The company focuses on fintech innovation and intelligent asset management as its core development directions, beginning to build a global strategic layout.

2021–2024: Continue to advance technology R&D, market research, and global business network construction, gradually forming a development system covering asset management, market research, user services, and ecosystem construction.

From 2025 to present, fully advance the construction of the Spark One global intelligent asset management platform, accelerating global market layout and ecosystem improvement.

3、 Corporate culture

Mission: To promote the inclusive development of intelligent wealth

management.

Vision: To become the world's leading intelligent asset management platform operator.

Values: Integrity, professionalism, innovation, responsibility, long-termism.

4、 Global business layout

The company continues to advance its international development strategy, gradually forming a global operational network covering multiple regions through technology research and development, market research, user services, and partner system building.

5、 Global market strategy

Adhering to: **four major strategic directions: technology globalization, research globalization, service globalization, and ecological globalization.** Through long-term investment and continuous innovation, we aim to build an internationally competitive intelligent wealth management platform.

6、 The US MSB registration system

The company places great importance on compliance construction and risk management, continuously advancing the construction of an international operational framework, and carries out business planning and operational management in accordance with relevant laws and regulations.

7、 Corporate governance structure

Board of Directors
Strategic Committee
Risk Control Committee
Global Research Center
Technology R&D Center
Market Operations Center
Customer service center

The Board of Directors, Strategy Committee, Risk Control Committee, Global Research Center, Technology R&D Center, Market Operations Center, and Customer Service Center together form the corporate governance system.

8、 Globalization development plans

In the future, the company will continue to invest resources in five major strategic directions: artificial intelligence, intelligent asset management, digital wealth ecosystem, global research network, and user service system.

Driving Spark One to grow into a key platform in the global intelligent wealth management sector.

Chapter 2: A New Era of Global Wealth Management

1、 The development history of the wealth management industry

The development of the wealth management industry is essentially a process of continuous evolution in human capital management methods. Over the past several centuries, wealth management has gone through three important stages:

1. Phase One: The Experience-Driven Era

In the era of traditional finance, investment decisions mainly relied on personal experience, market intuition, and limited sources of information.

Investors need to rely on their own knowledge and judgment for asset allocation.

Investment efficiency at this stage is limited by information access capabilities and professional expertise.

2. Phase Two: The Digital Age

The development of internet technology has changed the way information is disseminated in the financial industry.

Electronic trading platforms, online financial services, and global capital market connectivity have greatly improved investment efficiency.

Investors can access market information and participate in global markets more quickly.

3. Stage Three: The Era of Intelligence

The development of artificial intelligence, big data analytics, cloud computing, and machine learning technologies is driving wealth management into a new stage of development.

Market analysis, risk identification, asset allocation, and strategy optimization are gradually being assisted by intelligent systems.

In the future, the wealth management industry will gradually shift from experience-driven to data-driven and intelligence-driven.

Spark One is a new generation intelligent asset management platform born out of this trend.

2、 The arrival of the artificial intelligence revolution

Artificial intelligence is becoming a key driving force for global economic development.

From manufacturing to healthcare, from logistics and transportation to financial services, AI technology is continuously improving industry efficiency.

In the financial sector, AI offers the following advantages:

1. Massive data processing capabilities

AI systems can analyze large amounts of market data in a very short time. Including:

Market prices

Trading volume

Macroeconomic data

News and information

Changes in market sentiment

and other multi-dimensional information.

2. Continuous operation capability

Traditional investing relies on human decision-making. AI systems can achieve round-the-clock monitoring and analysis. Changes in the global market can be captured and addressed in a timely manner.

3. Continuously optimize capabilities

Machine learning models can continuously optimize analytical logic. As data accumulates and model iteration progresses, the system can continuously improve analysis efficiency and decision quality.

Artificial intelligence is not a replacement for humans. Instead, it has become an important auxiliary tool for professional decision-making in the field of wealth management.

3、 The rise of the digital asset era

With the development of blockchain technology, digital assets have become an important part of global financial markets. More and more institutions are beginning to pay attention to the development opportunities in the digital asset market.

The development of the digital asset market has driven the following improvements: improved global capital flow efficiency, accelerated asset digitization, innovative cross-border financial development, and the construction of new financial infrastructure.

Digital assets are not just an emerging asset class. It also represents an important direction for the future development of the financial system.

In the future, digital assets will further integrate with traditional financial markets. This will create a more open and efficient global financial ecosystem.

4、 The long-term value logic of gold assets

Throughout the history of human financial development, gold has always played an important role. For thousands of years, gold has been widely regarded as a store of value. Its core value mainly comes from:

Scarcity

Global recognition

Liquidity

Long-term stability

During periods of global economic volatility, gold is often regarded as one of the important safe-haven assets. At the same time, with the development of global capital markets, gold remains an important component of the global asset allocation system. Therefore, gold is not only a carrier of historical value. It is also an important strategic asset in modern asset management systems.

5、 New trends in global capital markets

Currently, the global capital markets are showing the following development trends:

1. Trend One

Global asset interconnectivity is increasing, and the interconnectedness between different markets continues to rise. Macroeconomic factors have a more pronounced impact on global markets.

2. Trend Two

Market volatility has increased, and the speed of information dissemination has accelerated. Market response cycles shorten. Traditional analytical methods face greater challenges.

3. Trend 3

With the increasing level of institutionalization and intelligence, more and more organizations are adopting data-driven and intelligent decision-making methods. The asset management industry is moving toward greater specialization.

4. Trend 4

Global asset allocation has become mainstream, and investors are increasingly valuing global asset allocation capabilities. Multi-market, multi-asset management models are becoming industry trends.

6. Development trends in AI asset management

In the next decade, AI asset management is expected to become an important part of the wealth management industry.

Its core development directions include:

Intelligent analysis

Intelligent research

Intelligent risk control

Smart asset allocation

Intelligent user services

AI technology will help asset management institutions improve:

Research efficiency

Risk management capabilities

Market monitoring capabilities

Service capability

Operational efficiency

Future competition will not only be about capital scale. It is also a competition of data capabilities, research capabilities, and technical capabilities.

7、 Spark One's Era Opportunity

Facing the era of the AI revolution, digital asset development, and global wealth management upgrades, Spark One has chosen to focus on technological innovation and long-term value creation as its core development direction.

By building:

AI intelligent asset management system

Global research center system

Institutional-level risk management system

Global user service system

Digital wealth ecosystem

Forming a complete platform architecture covering technology, research, management, and services.

Spark One believes: The core competitiveness of future wealth management comes not only from capital scale. This comes from technical capabilities, research capabilities, risk management capabilities, and global resource integration capabilities. In the context of the intelligent era, wealth management is entering a new stage of development. Spark One hopes to become a key participant and driver of this transformation.

Chapter 3: Introduction to the Spark One project

1、 What is Spark One?

Spark One is a global intelligent asset management platform developed by SPARK UNION CAPITAL INC.

The platform is based on artificial intelligence technology, big data analytics, quantitative models, and a global research system, dedicated to building a new generation of intelligent asset management service systems covering global markets.

Spark One is more than just a technology product. It is also a future-oriented wealth management concept. The platform aims to help users participate more efficiently in the global asset management ecosystem by combining technological innovation with professional research capabilities.

2、 Platform positioning

Spark One is positioned at:

Global Intelligent Asset Management Platform

Global intelligent asset management platforms differ from traditional trading software. Spark One does not emphasize users engaging in high-frequency trading or short-term market gaming. Platform Focus:

Asset management

Risk management

Long-term value management

Global asset allocation

Research-driven decision-making

Intelligent assisted analysis

Spark One is committed to building future-ready wealth management infrastructure. Enhance asset management efficiency through technology and research capabilities.

3、 Platform vision

Building a globally leading intelligent asset management platform. It will become an important bridge connecting artificial intelligence technology with the global wealth management ecosystem. Promote the wealth management industry toward greater intelligence, specialization, and globalization.

4、 Platform mission

Lowering the threshold for professional asset management through artificial intelligence technology.

Enhance asset management efficiency through research-driven growth.

Enhancing user service capabilities through global expansion.

Creating sustainable value through long-termism.

5、 Platform Service Philosophy

Spark One insists:

Technology-driven value

Leverage advanced technology to enhance asset management efficiency.

Risk management is a priority

Risk control is regarded as the core foundation for the platform's long-term development.

Research creates value

Adhere to the research-driven decision-making philosophy. Continuously enhance platform capabilities through a global research system.

Long-termism develops

Focus on long-term value creation. Adhere to a sustainable development strategy.

Global coordinated development

Integrate global resources. Building an international intelligent wealth management platform.

6、 Global user value system

Spark One aims to create value for users on four levels:

Technical value

Leveraging AI technology to enhance market analysis capabilities.

Research value

Support decision optimization through a professional research system.

Service value

Establish a global user service system. Enhance user experience.

Ecological value

Building a long-term global wealth ecosystem.

7、 Why choose Spark One?

Facing the ever-changing global market environment. Users need more than just a trading tool. What is needed is a platform that can continuously study the market, identify risks, and optimize management efficiency. Spark One develops a complete intelligent asset management solution through AI technology, global research, risk management, asset allocation, and user services.

The platform's core advantages include:

Global vision

Continuously monitor major global market developments.

AI-driven

Leverage advanced technologies to enhance research and analysis efficiency.

Risk first

Establish a multi-layered risk management system.

Long-term development

Adhering to the concept of long-term value creation.

Global ecosystem

Building a future-oriented wealth management ecosystem network.

8、 Differences between Spark One and traditional platforms

Traditional trading platforms

Main services include: account opening, trading, market display, and order execution.

Users need to complete the following tasks themselves: market research, risk assessment, strategy formulation, and trading decisions.

Spark One

Focus more: asset management, market research, risk management, intelligent analysis, global allocation, and long-term value management.

Spark One aims to provide users with a more professional and systematic wealth management experience through technology and research capabilities.

9、 The difference between Spark One and ordinary AI quantification platforms

In recent years, a large number of AI quantification-related projects have emerged in the market. However, most platforms mainly focus on a single strategy or single market. Spark One believes that true future competitiveness will not come solely from quantitative models themselves. And it comes from: research capabilities, risk control capabilities, technical capabilities, globalization capabilities, and ecosystem construction capabilities. Therefore, Spark One builds a development model driven by five core capabilities: AI technology system, global research system, risk control system, user service system, and ecosystem collaboration system.

10、 Spark One's core competitive barrier

The first level

AI intelligent analysis capabilities enhance system research capabilities through continuous iteration.

SPARK UNION CAPITAL INC.

The second floor

A global research center system forms long-term research advantages.

The third level

The institutional-level risk management system lays the foundation for long-term stable development.

The fourth level

The global user service network enhances platform operational efficiency and service capabilities.

The fifth level

The Spark ecosystem builds a long-term platform value network.

11、 Spark One's long-term development strategy

In the future, Spark One will continue to be built around the following directions:

AI asset management

Continuously optimize technical and research capabilities.

Global Research Center

Establish a research network covering major markets.

Smart wealth services

Continuously improving user service experience.

Digital gold ecosystem

Explore the digital development direction of gold assets.

Global Wealth Community

SPARK UNION CAPITAL INC.

Driving the growth of users, partners, and the platform together. Through technological innovation, research-driven development, and ecosystem building.

Spark One is committed to growing into one of the leading platforms in the global smart asset management sector.

12、 We believe

The future wealth management industry will no longer rely solely on experience, but on data, research, and intelligent technology.

Future competition will not only be between products but also between platform capabilities.

Spark One aims to build an intelligent wealth management platform that connects technology, research, services, and global resources through continuous innovation and long-term investment. This allows more people to share in the development opportunities of the intelligent era.

Intelligence Drives Value · Technology connects the future

Chapter 4 Spark One Core Solutions

1、 Building the next generation of intelligent asset management systems

In today's rapidly changing global financial markets, traditional asset management models are facing new challenges. Market information has exploded. Asset classes continue to grow. Global market interactions continue to strengthen. The speed of market volatility continues to increase. Relying solely on manual analysis is no longer sufficient to meet the demands of modern asset management.

Spark One combines artificial intelligence technology, a global research network, and a risk control framework to build a new generation of intelligent asset management solutions. The platform's core objectives are:

Improve research efficiency

Enhance risk management capabilities

Optimize asset allocation capabilities

Enhance global market responsiveness

Achieving long-term value management

2、 Spark One intelligent asset management closed-loop

Spark One establishes a complete intelligent asset management operation system. Formation:

Market monitoring→ data analysis→ risk assessment→ strategy generation→ intelligent execution→ dynamic optimization→ continuous research→ market monitoring

Cycle management mechanism. Through continuous iterative optimization, the overall system operation efficiency is improved.

1 Global market monitoring system

Spark One continues to monitor developments in major global financial markets. Including: international gold market, digital asset market, foreign exchange market, global index market, commodity market, macroeconomic data, and changes in monetary policy and trends in international capital flows. The platform builds a multidimensional research framework through a global market monitoring system, helping the system promptly identify market changes.

2 AI intelligent analysis system

Market changes are often influenced by multiple factors working together. Spark One uses AI technology to build multidimensional analytical models. Analysis dimensions include:

Price changes

Changes in trading volume

Volatility changes

Changes in market sentiment

Macroeconomic changes

Changes in capital flows

Changes in risk factors

Through cross-analysis of multidimensional data, a more comprehensive market research capability is formed.

3 Multi-asset collaborative management system

A single asset management model is easily affected by market cycles. Therefore, Spark One has established a multi-asset collaborative management framework, with the platform focusing on research:

Gold assets

Digital assets

Foreign exchange market

Index market

Commodity markets

Through multi-market collaborative research, enhance the flexibility and adaptability of asset management systems.

4 Gold asset management system

Gold is recognized globally as one of the most important strategic assets. It has long held an important position in the global wealth management system. Spark One has established a dedicated gold research framework, with research topics including:

International gold price trends

Global central bank policies

Changes in inflation data

Changes in the US Dollar Index

International hedging needs

Global geoeconomic factors

Through long-term research, we enhance our gold market analysis capabilities and provide important reference for asset management systems.

5 Digital asset research system

With the development of the digital economy, digital assets have gradually become an important part of the global financial market. Spark One has established a digital asset research system, with a focus on:

Industry development trends

Changes in market liquidity

Technological innovation direction

Changes in the policy environment

Market risk factors

Institutional participation

Through long-term research and dynamic monitoring, continuously enhance our understanding of the digital asset market.

6 Global research-driven mechanisms

Spark One insists: Research-driven decisions, not emotion-driven decisions. Platform Establishment Four Major Research Directions: Gold Research Center, Digital Asset Research Center, Macroeconomic Research Center, AI Finance Research Center, and Four Major Research Directions to Form Continuous Research and Knowledge Accumulation Capability. Research results will continue to support:

Market analysis

Risk assessment

Strategy optimization

Asset allocation

Product innovation

and other fields.

7 Intelligent risk management system

Risk management has always been an important part of the asset management system. Spark One insists: risk management takes precedence over the pursuit of returns, and the platform establishes a multi-layered risk management framework. Including:

Market risk monitoring

Liquidity risk monitoring

Volatility monitoring

Abnormal event monitoring

Dynamic risk assessment

Intelligent early warning mechanism

By combining technology and research, enhance risk identification and management capabilities.

8 AI-assisted decision-making system

Spark One believes that AI is not a substitute for professional research, but rather helps research teams improve efficiency. The platform uses AI-assisted systems to enhance data processing capabilities, enhance market research efficiency, enhance risk identification capabilities, and optimize decision

support capabilities. Implementation:

Data-driven

Research-driven

Intelligent assistance

an integrated management model.

9 Global Asset Allocation Concept

One of the key directions for future wealth management is global asset allocation. Spark One insists:

Global vision

Long-termism

Risk diversification

Value discovery

Resource integration

Five Principles. By combining global market research capabilities with intelligent analysis capabilities, the platform continuously enhances its overall asset management level.

3、 Core Solution Advantages of Spark One

Compared to traditional asset management models, Spark One aims to build the following core capabilities:

Global market research capabilities

Continuously monitor changes in major global markets.

AI intelligent analysis capabilities

Enhance the efficiency of market research.

Multi-asset management capabilities

Build a more flexible management framework.

Risk management capabilities

Establish a long-term security foundation.

Global service capabilities

Enhance user experience and platform operational efficiency.

Ecosystem collaboration capability

Promoting the long-term development of the platform.

4、 A future-oriented intelligent asset management platform

Future wealth management competition will not only be a competition of capital. And even more:

Technical capability**Research capabilities****Risk management capabilities****Global resource integration capabilities****Ecological construction capabilities**

Competition. Spark One aims to build an intelligent asset management platform that integrates technology, research, services, and ecosystem through continuous investment and long-term development. Providing global

SPARK UNION CAPITAL INC.

users with more professional, efficient, and sustainable wealth management solutions.

Spark One believes that the core value of future wealth management will come from intelligence, globalization, and long-term value creation capabilities. This is exactly the direction Spark One continues to strive for.

Chapter 5 AI Technology Architecture

As the core technical foundation of the Spark One intelligent asset management platform. Spark AI Quant Engine (SAQE) is a platform-built intelligent analysis and decision engine. Its main responsibilities are:

Integrate global market data

Build intelligent analysis models

Assisting research decision-making

Optimize asset management efficiency

Strengthen risk control capabilities

Support the operation of the global market monitoring system

Spark AI Quant Engine is not a single model, but an intelligent collaborative architecture composed of multiple specialized systems. Through continuous learning, dynamic optimization, and research-driven mechanisms, it provides technical support for the entire Spark One ecosystem.

1、 Spark AI Quant Engine architecture

Spark AI Quant Engine consists of five core systems:

AURORA

Gold strategy research engine.

TITAN

Trend analysis engine.

ORION

Risk control engine

PHOENIX

Strategy optimization engine.

ATLAS

Global asset allocation engine.

Five major systems together form the Spark One intelligent asset management technology framework. Develop comprehensive capabilities for analysis, research, evaluation, optimization, and configuration.

2、 AURORA Gold Strategy Research Engine

AURORA is a specialized research system developed by Spark One for the gold market. Its main tasks include: gold market monitoring, international gold price research, macroeconomic correlation analysis, market sentiment analysis, global capital flow research, and long-term trend research. AURORA continues to follow:

Global central bank policies

Changes in the US Dollar Index

Inflation data

Goeconomic environment

International capital flows

Changes in market risk appetite

Through long-term research and data analysis, we have developed capabilities in gold market research. Supporting the platform's overall research system.

3、 TITAN trend analysis engine

One of the core characteristics of financial markets is trends. TITAN focuses on identifying and researching market trends. Its main responsibilities include: trend monitoring, trend identification, trend intensity assessment, cycle research, volatility analysis, and market structure research. TITAN can continuously analyze:

Short-term trends

Medium-term trend

Long-term trend

Market cycle changes

Changes in capital flows

Market behavior characteristics

Enhance overall market awareness through trend research.

4、 ORION Risk Control Engine

In the Spark One system, risk management always outweighs the pursuit of returns. ORION is the platform's core risk management system.

Its main responsibilities include:

Market risk identification

Volatility monitoring

Abnormal situation warnings

Liquidity analysis

Risk level assessment

Risk event management

ORION has built a multi-layered risk management mechanism to help the

platform enhance its risk identification capabilities. Enhances system stability. Risk control is not only a technical issue, but also the foundation for the platform's long-term development.

5、 PHOENIX Strategy Optimization Engine

The market environment is constantly changing, and any research system needs to be continuously optimized. PHOENIX is responsible for the continuous upgrade of the platform's overall research model and analytical framework.

Its core tasks include:

Model evaluation

Logic optimization

Parameter adjustment

Systematic learning

Research upgraded

Capacity iteration

PHOENIX empowers Spark One with sustainable growth capabilities, helping the platform adapt to the ever-changing global market environment.

6、 ATLAS Global Asset Allocation Engine

ATLAS is responsible for global market research and asset allocation analysis. Its main research areas include:

Gold market

Digital asset market

Foreign exchange market**Global index markets****Commodity markets****Macroeconomic markets**

Through cross-market research capabilities, ATLAS helps platforms establish a global perspective and enhances overall asset allocation capabilities. One of the key trends in future global wealth management is multi-market collaborative management. ATLAS will become a key part of Spark One's globalization strategy.

7、 AI data center architecture

Data is a crucial foundation for AI operation. Spark One establishes a multi-layer data center architecture. Main includes:

Market Data Center**Research data centers****Risk data centers****Behavior Analysis Center**

Global research databases, the platform continuously accumulates and organizes data. Enhance overall research efficiency and analytical capabilities.

8、 AI continuous learning mechanism

The value of artificial intelligence comes not only from computing power but also from continuous learning ability. Spark One establishes an AI continuous learning framework. Via:

Data updates

Research feedback

Market validation

Model optimization

Knowledge accumulation

Ability upgrades

Achieve long-term growth. The continuous learning mechanism enables the platform to continuously adapt to new market environments and enhance its overall research capabilities.

9、 Global Research Collaboration Network

In the future, wealth management will rely not only on technology but also on research capabilities. Spark One's technology architecture is deeply integrated with a global research center system. Formation:

AI technology

Global Research

Risk management

Market analysis

collaborative model. Technical systems provide efficiency. The research system provides depth. Together, they promote the platform's sustainable development.

10、 Intelligent decision-supporting framework

Spark One believes:

The future direction of wealth management is not complete automation, but intelligent decision-making assistance.

Therefore, the platform insists:

Technical service research

Research guidance and management

Risk control is a priority

Long-term value orientation

Basic principles. Combining artificial intelligence with professional research capabilities. Continuously improve overall asset management efficiency.

11、 Technology R&D strategy

The next five years. Spark One will continue to invest resources in building: next-generation AI analysis models, global research databases, intelligent risk control systems, asset allocation systems, intelligent user service systems, and digital wealth ecosystem technology platforms. Promote continuous upgrading of platform technical capabilities. Building long-term competitive advantages.

12、 Technical barriers and core competitiveness

Spark One believes that true competitive advantage is not a single algorithm. Rather:

Technical system

Research system

Risk system

Service system

Ecosystem

The combined platform capabilities will gradually upgrade competition in the wealth management industry from product competition to platform capability competition. Spark One aims to build a globally competitive intelligent asset management technology platform through long-term investment.

13、 Building future-oriented intelligent wealth infrastructure

Artificial intelligence is reshaping the wealth management industry. Technological innovation is driving industry upgrades. Spark One hopes to continue building on:

Spark AI Quant Engine

AURORA

TITAN

ORION

PHOENIX

ATLAS

Six core systems form a complete technical architecture covering research, analysis, risk management, asset allocation, and service systems. This provides a solid foundation for the future construction of a global intelligent wealth management ecosystem.

Chapter 6 Custodian Asset Management System

1、 What is custodial asset management?

With the development of the global wealth management industry, asset management models are continuously evolving. Traditional investment models usually require investors to complete the following tasks themselves:

Market research

Information gathering

Risk analysis

Trading decisions

Asset allocation

Continuous management

However, as global market complexity continues to rise, More and more professional institutions are adopting custodial asset management models.

The core concept of custodial asset management is that professional teams, research systems, and technical systems collaborate to complete asset management, so users do not need to constantly monitor market changes. Instead, it participates in asset management services through a specialized management system.

Spark One is a next-generation intelligent asset management platform built on this very concept.

2、 Why is the managed model becoming a trend?

Modern financial markets have entered a highly specialized era. The

amount of data generated daily far exceeds the processing capacity of individual investors. The pace of market change continues to accelerate. Global asset interconnections are continuously strengthening. In this environment, The importance of professional research skills, technical skills, and risk management skills continues to rise. As a result, more and more institutions are beginning to improve asset management efficiency through professional management models. The future direction of wealth management. It will gradually shift from individual decision-making to specialized and intelligent collaborative management.

3、 Differences between Spark One and traditional trading platforms

1. Traditional trading platforms

Main offerings: account management, market viewing, order execution, trading tools.

Users are responsible for market research, risk assessment, strategy formulation, fund management, and trade execution.

2. Spark One

Focus more on: asset management, market research, risk control, intelligent analysis, global allocation, and long-term value management. Spark One is not centered around trading tools, but rather on asset management capabilities.

4、 Global institutional asset management model

In the global asset management industry. Many professional institutions adopt centralized research and unified management models. Its core strengths lie in: resource integration, research collaboration, risk control, operational efficiency, and long-term management capabilities. Professional organizations usually establish:

Research team

Risk management system

Technical support system

Market monitoring network

Asset allocation system

Together, they form a complete management framework. Spark One builds its platform on this very foundation.

5、 Spark One strategy pool management system

To improve research efficiency and management capabilities, Spark One adopts a strategy pool management philosophy. Platform by:

Market research

Risk assessment

Strategy analysis

Asset allocation

Dynamic optimization

Establish a unified research and management framework. Through the strategy pool system. The platform enables more efficient research collaboration and risk management. The core goal of the strategy pool is not to pursue performance in a single market, but to build a long-term stable asset management system.

6、 Why not display single trade orders?

This is one of the most concerning issues for many users.

Why doesn't the platform offer the order display feature found in traditional trading software?

The answer is:

Spark One is positioned as an asset management platform.

Non-trading tool platforms, in the professional asset management industry, the real value creation is not a single transaction. Rather:

Research capabilities

Risk management capabilities

Asset allocation capability

Technical capability

Long-term operational capability

These capabilities form the core competitive advantage of an institution.

Therefore, platforms place greater emphasis on building overall management capabilities rather than showcasing individual transaction behaviors.

7、 What users should really focus on

Spark One believes that mature investors should focus on the following key areas:

Whether the platform will operate long-term

Whether risk management is sound

Whether the research system is professional

Whether the technology system is continuously being upgraded

Whether user services are continuously optimized

Whether the ecosystem has the capability for long-term development

A single transaction is a process; long-term management capability is the core value.

Therefore, Spark One always insists:

Research creates value

Management creates value

Long-termism creates value.

8、 Spark One's Asset Management Philosophy

The platform adheres to the following principles:

Long-termism

Focus on long-term value creation.

Risk first

Risk control outweighs pursuit of returns.

Research-driven

Research guides decision-making.

Data-driven

Data supports analysis.

Technology empowerment

Technology improves efficiency.

Global vision

Global resource integration.

These principles together form the Spark One Asset Management Philosophy.

9、 User asset management service process

Spark One establishes standardized management processes. Main includes:

User service → asset management needs analysis → research and support → risk assessment → asset management system operation → continuous monitoring → dynamic optimization → user service feedback

Forming a complete service closed loop.

10、 User experience and transparency construction

Spark One believes that transparency means not only displaying data but also building a trustworthy service system. Therefore, the platform will continue to build:

Market research report

Industry analysis report

Risk alert system

Platform operation information disclosure

Global development updates released

User education system

Helping users gain a more comprehensive understanding of the platform's development.

11、 The future value of managed management

The future development of the wealth management industry. will increasingly depend on:

Technical capability

Research capabilities

Risk management capabilities

Global resource integration capabilities

Professional service capabilities

Custodial asset management models can integrate these resources more efficiently, thereby improving overall management efficiency.

Spark One hopes to continue building through ongoing development. Building a more professional, efficient, and intelligent asset management service system.

12、 From trading tools to wealth management platforms

In the past, investors focused more on the transaction itself. In the future, investors will pay more attention:

Research capabilities

Risk control capability

Management ability

Service capability

Ecological capabilities

The development direction of the wealth management industry will gradually upgrade from a single trading tool to a comprehensive wealth management platform.

Spark One is committed to driving this transformation by continuously enhancing technology, research, and service capabilities to build a future-oriented global intelligent asset management platform.

13、 We believe

True wealth management value lies not in a single transaction, but in the ability to continuously create value over the long term.

A truly outstanding platform not only provides trading tools, but also should have:

Professional research capabilities

Risk management capabilities

Global resource integration capabilities

Long-term ecosystem construction capability.

Spark One hopes to enable more users to share the opportunities of the intelligent era and global market development through its custodial asset management system.

Under the long-term philosophy, we grow and develop together, jointly embracing the era of intelligent wealth.

Chapter 7: The Global Research Center System

1、 Introduction to the Global Research Center

In the modern asset management industry, research capability often determines the level of asset management capability. Technology can improve efficiency, but what truly determines long-term value creation is always the research system.

Therefore, from the early stages of platform construction, Spark One established the development philosophy of "research-driven decision-making, data-supported research, and technology-empowered management."

The Spark One Global Research Center is a key strategic component of the platform, with core responsibilities including:

Global market research

Industry trend research

Asset value research

Macroeconomic research

AI financial research

Risk monitoring research

Asset allocation research.

The research center continuously accumulates knowledge and research achievements to support the platform's long-term development.

2、 Why research ability is so important

In global capital markets, market prices are often just the outcome, and the driving factors behind price changes come from:

Macroeconomic changes

Changes in monetary policy

International capital flows

Industry development trends

Changes in market sentiment

Technological innovation and development

Geoeconomic environment.

If you only focus on price changes, you often only see the results. The value of the research system lies in:

Understand the reason

Discover trends

Identify risks

Look for opportunities.

Therefore, Spark One believes that research capability is one of the most important core competencies in the asset management industry.

3、 Gold Market Research Center

Gold is one of the oldest and most important assets in the world and a key component of the global wealth management system.

Spark One has established a Gold Market Research Center, continuously focusing on:

International gold market

**dynamics, changes in global central bank reserves,
inflation data trends,
changes in the US dollar index,
changes in international capital flows
, changes in global demand for safe-haven
assets, and geopolitical economic impacts**

Through long-term tracking and analysis, the research center has developed systematic research capabilities on the gold market.

In the future, the Gold Research Center will continue to improve the global gold research database, increasing the depth and coverage of research.

4、 Digital Asset Research Center

With the development of blockchain technology, digital assets are becoming an important part of the global financial market.

The Digital Asset Research Center mainly focuses on:

**Industry development trends,
changes in market structure
, global regulatory dynamics,
technological innovation directions
, market liquidity changes,
institutional participation
, risk factor analysis**

Through long-term research, it helps platforms enhance their understanding and cognition of the digital asset industry.

In the future, the research center will continue to monitor trends in the digital economy and asset digitalization.

5、 Macroeconomic Research Center

The development of the global market is inseparable from the macroeconomic environment. Therefore, Spark One has established a macroeconomic research center focusing on:

**Global economic growth trends
, inflation changes,
interest rate policy changes,
monetary policy adjustments,
international trade changes,
capital flow trends,
emerging market development**

The research center helps platforms develop long-term market observation capabilities by building a global economic analysis framework.

6、 AI Financial Research Center

Artificial intelligence is transforming the way the financial industry develops. The future wealth management industry will increasingly rely on the combination of technology and research.

Main research areas of the AI Finance Research Center:

**Artificial Intelligence Development Trends:
Fintech innovation
, machine learning applications
, data analysis technology,
intelligent risk control technology,
intelligent service system**

The research center is dedicated to exploring the application value of AI technology in wealth management, continuously enhancing the platform's technological innovation capabilities.

7、 Global market monitoring network

To improve research efficiency, Spark One has established a global market monitoring network and continuously monitors:

Gold market,
digital asset market,
global index market,
commodity market,
foreign exchange market
, macroeconomic data,
international capital flows

Through a round-the-clock market monitoring mechanism, the efficiency of market information acquisition is improved, and the response capability of research systems is strengthened.

8、 Global research database construction

Building research capabilities requires long-term data support. Therefore, Spark One continues to build a global research database, which mainly includes:

Market data
, industry data,
economic data,
risk data
, research achievement
case database,
knowledge database

Through long-term accumulation, we continuously improve the construction of our research system.

9、 Market research report system

Research results need to be translated into practical value. Therefore, Spark One has established a research report system, mainly including:

Global Market Weekly,
Global Market Monthly,

**Gold Market Special Report
, Digital Asset Special Report
, Macroeconomic Research Report,
Industry Trend Research Report,
Risk Watch Report**

Research reports will become an important reflection of the platform's research capabilities.

10、 Risk research and early warning systems

Risk management has always been an important part of asset management. Global Research Centers continue to focus on:

**Market volatility risk,
liquidity risk,
policy risk,
industry risk
, systemic risk, and
sudden event risk**

By combining research and monitoring, the platform's risk identification capability is enhanced.

11、 Global mechanisms for transforming research outcomes

Spark One believes that the value of research lies not in the report itself, but in the translation of results.

The research center will continue to support:

**Market analysis system,
risk management system,
technology R&D system,**

**asset allocation system,
user service system, product
innovation system**

Promote research outcomes to truly serve platform development.

12、 Global research network development plan

In the future, Spark One will continue to expand its research coverage, focusing on the following developments:

**Gold Research Network,
Digital Asset Research Network
, Macroeconomic Research Network, AI Financial Research Network
, Global Market Monitoring Network**

A comprehensive research system covering multiple fields has been formed.

13、 Research drives the future

Spark One believes: technology can improve efficiency, and capital can create scale. But what truly determines a platform's long-term competitiveness is always its research capability.

The future competition in the wealth management industry essentially is:

**Compete in cognitive ability
, research ability,
risk management ability,
and global resource integration ability**

Spark One hopes to continuously build a global research center system, continuously enhance the platform's professional capabilities and long-term

value creation capabilities, and build a future-oriented intelligent asset management research platform.

14、 Building a global wealth management think tank

In the future, Spark One not only hopes to become an intelligent asset management platform but also aims to grow into an important research platform in the global wealth management field.

Through the coordinated development of global research centers, AI technology systems, risk management systems, asset management systems, and user service systems, it aims to build a global wealth management think tank for the intelligent era.

Research creates cognition, cognition creates value.

Chapter 8 Risk Control and Security Systems

1、 Risk control is the lifeline of asset management

In the wealth management industry, returns create platform value, while risk management determines the platform's lifespan. Looking at the development of global financial markets, whether traditional financial institutions or modern asset management institutions, the core factor for long-term success has never been just profitability; more importantly,

**Risk identification capability,
risk management capability,
risk response capability,
and long-term stable operation capability**

Spark One always insists:

**Risk control takes precedence over returns, pursuing
safety and stability over short-term growth,
while long-termism takes precedence over short-term behavior**

Therefore, the platform regards risk management as an important foundation of the overall operational system.

2、 Risk Control Committee

To establish a comprehensive risk management system, Spark One has set up a Risk Control Committee. The main responsibilities of the committee include:

**Formulate risk management frameworks
, build risk assessment mechanisms
, risk monitoring systems, manage
major risk events, research
risk early warning mechanisms, optimize**

emergency response mechanisms

The Risk Control Committee forms a collaborative management mechanism with the Global Research Center, AI Technology Center, Operations Management Center, and User Service Center to jointly ensure the safe operation of the platform.

3、 Spark One Risk Management Framework

Spark One has established a multi-layered risk management system, forming:

Prevention → identification → assessment → early warning → response → optimization

A complete management closed loop.

The platform's risk management system mainly includes:

**Market risk management
, technical risk management,
operational risk management
, data security management,
account security management
, system risk management, reputation
risk management**

Enhance overall safety levels through systematic management.

4、 AI risk identification system

As market complexity continues to rise, traditional risk identification methods can no longer meet the demands of modern asset management. Spark One has established an AI risk identification system, focusing on:

Abnormal market fluctuations

, extreme risk events
, liquidity changes,
abnormal trend changes,
market sentiment changes,
risk aggregation signals

Through continuous monitoring and analysis, the platform helps improve the efficiency of risk detection.

The goal of risk identification is not to predict the future, but to increase sensitivity to changes in risk.

5、 Multi-layered risk control model

To enhance risk management capabilities, Spark One has built a multi-layered risk control model.

Layer 1: Market Risk Monitoring

Continuously monitors global market changes.

Layer Two: Risk assessment system

to evaluate changes in risk level.

Third layer: Dynamic risk warning

to promptly detect potential risk signals.

Layer Four: Risk Response Mechanism

: Develop response plans tailored to different risk situations.

Fifth level: Continuously optimize mechanisms

and continuously improve risk management capabilities.

Establish a comprehensive risk management framework.

6、 Dynamic risk assessment system

With the constantly changing market environment, risk management must maintain dynamic adjustment capabilities. Spark One has established a dynamic risk assessment mechanism and continuously monitors:

**Market volatility,
capital flows
, market liquidity,
industry trends,
global economic environment
, policy changes, factors**

Enhance risk management flexibility through dynamic assessment.

7、 Intelligent early warning mechanism

Early warning capability is a crucial part of risk management. Spark One has established an intelligent early warning system, focusing on monitoring:

**Abnormal fluctuations
, changes in market structure
, risk concentration phenomena
, extreme events, risk
system operating status**

When risk factors change, the system can promptly identify and issue risk warnings.

8、 Data security system

Data security is a crucial foundation for modern digital platforms. Spark One places great emphasis on data security construction, and the platform continues to advance:

**Data storage, security
, data access control
, data transmission protection**

, **system security, management**
, **privacy protection mechanisms**

Establish a multi-layered data security protection system. The platform adheres to the principle of prioritizing user data security.

9、 User account security system

User account security is an important part of the platform's service system. Spark One continues to improve:

Identity authentication mechanism
, **account access management,**
abnormal behavior monitoring
, **security verification mechanism**
, **account protection measures**

Continuously improve account security management capabilities. The platform encourages users to establish good safe usage habits and jointly maintain account security.

10、 System security architecture

As the platform grows, the importance of system stability continues to rise. Spark One continues to build:

System monitoring system,
operation assurance system,
fault early warning system,
disaster recovery backup system,
emergency recovery system

Ensure the platform can operate continuously and stably.

11、 Emergency response mechanisms

Facing a complex market environment, the platform has established emergency response mechanisms, mainly including:

- Risk, incident response**
- , system abnormal response,**
- security incident response**
- , operational risk response**
- , data security response**
- , major emergency incident response**

By building contingency plans and optimizing processes, the platform's overall response capability has been enhanced.

12、 User education and risk awareness building

Risk management belongs not only to the platform but also to every user. Spark One continues to drive:

- Risk education**
- , market awareness education**
- , safety education**
- , long-term education,**
- asset management philosophy education**

Helping users establish a more rational understanding of wealth management.

13、 Risk management culture

Risk management is not just a set of systems, but also a culture. Spark One advocates:

- Prudent**

**, professional,
accountable
, transparent
, long-termist**

Integrate risk management concepts into every aspect of platform construction.

14、 Balancing safety and development

The platform believes that security is not an obstacle to development, but the foundation for long-term growth. A truly outstanding platform not only creates value, but can also generate value in a long-term and stable manner. Therefore, Spark One insists:

**Emphasize safety through innovation
, strengthen risk control during development
, and improve systems through growth**

Achieve long-term sustainable development of the platform.

15、 Build a trustworthy intelligent asset management platform

The future development of the wealth management industry will require not only advanced technology but also a comprehensive risk management system. A platform that users truly trust not only has technical capabilities but also possesses:

**Risk management capability,
safety management capability,
long-term operation capability,
and continuous service capability**

SPARK UNION CAPITAL INC.

Spark One aims to build a safer, more professional, and trustworthy intelligent asset management platform by continuously improving the Risk Control Committee, AI risk identification system, multi-layer risk control model, data security system, account security system, and emergency response system.

Security builds trust, and trust creates value.

Chapter 9: Wealth Growth System

1、Wealth Growth Philosophy

Spark One believes that true wealth growth comes not only from the expansion of asset size, but also from the accumulation of long-term value creation capabilities.

In traditional wealth management models, users are often merely recipients of asset management services.

Within the Spark One ecosystem, users are not only beneficiaries of platform services but also key participants in ecosystem development.

Therefore, the platform has established a comprehensive wealth growth system to help users continuously improve in four dimensions: asset growth, cognitive growth, capability growth, and influence growth.

The Wealth Growth System aims to:

Driving long-term value creation;

Encourage continued participation in platform ecosystem construction;

Establish fair and transparent development mechanisms;

Promoting collaborative development within the global wealth community;

Building a sustainable wealth management ecosystem.

2、Spark One wealth tier system

To help users establish a clear development path, Spark One has established a seven-tier wealth growth system.

Level	Identity name
S1	Regular members
S2	Investors
S3	Elite investors
S4	Director
S5	Marketing Director
S6	Regional Director
S7	Global Ambassador
S8	Global Leader
S9	Honorary Leader

As levels increase, users will gradually gain higher-level service benefits, growth benefits, and ecosystem benefits.

3、Promotion standards

Level	Directly recommend valid members	Effective team members	Team Account Assets (U)	Personal Account Assets (U)
S1Regular Member	0	—	—	—
S2 investors	3 people	10 people	10,000	1,000
S3 Elite Investors	5 people	30 people	50,000	5,000
S4 Director	10 people	80 people	200,000	10,000
S5Marketing Director	20 people	200 people	800,000	30,000
S6Regional Director	30 people	500 people	3,000,000	80,000
S7Global Ambassador	50 people	1,500 people	8,000,000	150,000
S8 Global Leader	50 people	3,000 people	15,000,000	300,000
S9Honorary Leader	50 people	5,000 people	30,000,000	500,000

Note: S1 Ordinary members are platform registered members with no

specific quantitative threshold requirements.

4. Dynamic grading evaluation mechanism

To ensure the fairness, activity, and sustainability of the wealth growth system, Spark One has established a dynamic grading evaluation mechanism.

Relegation Mechanism

If users continuously meet the current level requirements, they will retain the corresponding level qualification and all benefits.

Level adjustment mechanism

If the user does not consistently meet the current level requirements, the system will rematch the eligible level based on the actual situation.

Re-promotion mechanism

When users meet higher level standards again, the system will automatically restore the corresponding level qualifications and benefits.

The platform encourages long-term growth rather than achieving one-time targets.

5. Definition of valid membership

1. Directly recommend valid members

Conditions	Requirements
Account balance	≥100U
Cumulative participation amount	≥500U
It has remained active for the past 15 days	Yes
Recommended	It is a first-generation member directly

relationships	recommended by me
---------------	-------------------

2. Effective team members

Definition	Explanation
Effective team members	The total number of team members meeting the valid membership criteria, including all members under their umbrella

6. Wealth hierarchy equity system

Level	Wealth growth bonus
S1 Regular Member	0%
S2 investors	0.05%
S3 Elite Investors	0.06%
S4 Director	0.07%
S5 Marketing Director	0.08%
S6 Regional Director	0.09%
S7 Global Ambassador	0.10%
S8 Global Leader	0.11%
S9 Honorary Leader	0.12%

7. Contribution incentive system

Spark One advocates long-term value creation and ecosystem

co-construction.

Directly promote the contribution award

Used to recognize the value contributions created by users helping new members understand the platform, participate in, and integrate into the ecosystem.

and occasionally awarded a contribution award

It is used to encourage collaborative community development and long-term ecological construction.

Team Contribution Award

Used to recognize the long-term value created during the team's overall growth.

Management Performance Award

Used to recognize managers' contributions in team building, user service, market development, and ecosystem operations.

8、 Spark Growth Incentive Program

To encourage members to grow quickly and actively participate in ecosystem development, Spark One has specially established the Spark Growth Incentive Program.

1. Promotion Reward Program

Level	Identity	Promotion rewards
S1	Regular members	None
S2	Investors	50 USDT
S3	Elite investors	100 USDT
S4	Director	300 USDT
S5	Marketing Director	1,000 USDT
S6	Regional Director	5,000 USDT
S7	Global Ambassador	20,000 USDT

Rewards are only issued for first-time promotions. No duplicate distribution for the same level.

2. Newcomer Growth Challenge Program

Challenge plan	Conditions to be met	Time limit	Rewards
New investors face challenges	Promoted to S2	30 days	50 USDT
Newcomer elite challenge	Promoted to S3	30 days	100 USDT
New Director Challenge	Promoted to S4	30 days	500 USDT
Hundred-Day Director Program	Promoted to S4	100 days	2,000 USDT
100-Day Marketing Director Program	Promoted to S5	100 days	5,000 USDT

3. Purpose of the Growth Incentive Program

Spark One believes:

Learning brings growth;

Growth creates value;

Value wins honor;

Honor takes responsibility.

The Growth Incentive Program aims to help members establish clear development goals and achieve long-term growth and value creation.

9. Exclusive benefits for high-level members

As membership levels continue to rise, users will not only gain higher-level growth benefits but also gain more exclusive service support and opportunities to participate in the ecosystem.

1. Dedicated customer service

High-level members can receive:

Dedicated customer service support

Priority service channels

Fast issue response

Exclusive consulting services

2. Advanced market research services

High-tier members will be given priority access to:

Global market research report

Special analysis of the gold market

Special research on digital assets

Macroeconomic Watch Report

Industry trend analysis report

3. Eligibility to participate in the Global Summit

After reaching the specified level, members will have the opportunity to be invited to participate:

Regional Summit

Global Strategy Forum

Wealth Management Exchange Meeting

Global General Assembly

High-end roundtable forum

4. Brand co-building plan

High-level members have the opportunity to participate:

Brand promotion plan

Market development plan

Community development plans

Regional cooperation programs

Ecological co-construction plan

5. Global Ambassador Honor System

Upon reaching the S9 Global Ambassador level, members will enter the platform's highest honor system and become key drivers of Spark One's global ecosystem development.

10、 Global membership club

The Global Members Club is Spark One's exclusive growth platform for high-level members, designed to connect outstanding members worldwide and promote knowledge sharing, resource collaboration, and long-term growth.

After reaching certain levels, users will have the opportunity to participate:

The Global Member Forum shares market insights,

exchanges development experiences,
and discusses industry trends

Global market research sharing

sessions, access the latest research findings from global research centers
, participate in special market analysis discussions
, and enhance market awareness

The Regional Development Summit

participates in regional strategic exchanges
, promotes regional market development
, and facilitates regional cooperation and development

Global strategic exchange activities

engage with outstanding members from different countries and regions,
broadening international perspectives.

The Global Ambassador Program

cultivates global leaders and promotes the construction of the platform's
global ecosystem.

High-end member exchange

activities promote resource collaboration and value co-creation among
outstanding members.

The platform hopes to connect more outstanding members through its
global membership club, jointly promoting the construction of a global wealth
ecosystem.

11、Wealth growth roadmap

Spark One establishes a clear and transparent growth path, helping every
user define their development goals and achieve long-term growth.

**Regular Member (S1), → Investor (S2), → Elite Investor (S3), →
Director (S4), → Marketing Director (S5), → Regional Director (S6), →
Global Ambassador (S7) , → Global Leader (S8), → Honorary Leader (S9)**

Wealth growth not only means leveling up, but also means:

Asset growth

enhances asset management capabilities.

Cognitive growth

continuously raises market awareness.

Skill growth

enhances management and collaboration skills.

Leadership growth

drives team building and ecosystem development.

Influence growth

has become an important force in building the platform ecosystem.

Spark One aims to help every member achieve growth and progress from participant to builder, and from builder to leader.

12、 Jointly building a global wealth ecosystem

Spark One believes that the future development of wealth management will rely not only on technological innovation but also on the collaborative growth of users, communities, and platforms.

The wealth growth system is not just a hierarchical system, but also a development mechanism that encourages long-term participation, long-term contribution, and long-term value creation.

In the future, the platform will continue to improve:

**Wealth Growth System,
Global Membership System,
Growth Incentive Program,
Global Member Club,
Global Ambassador Program,
Ecosystem Co-construction Mechanism**

Driving user growth, community growth, platform growth, and global ecosystem growth.

SPARK UNION CAPITAL INC.

Spark One believes:

**Personal growth drives team growth,
team growth drives community growth
, community growth drives ecological growth
, ecological growth creates long-term value**

In the future, Spark One will continue to adhere to long-termism, value creation, openness and collaboration, and mutual growth, working hand in hand with global members to build an open, collaborative, and sustainable intelligent wealth ecosystem.

Chapter 10: The Spark Ecosystem

1、 Building a global intelligent wealth ecosystem

Spark One's development goal is not only to become an intelligent asset management platform but also to build an intelligent wealth ecosystem that integrates artificial intelligence, wealth management, digital economy, global communities, and future technologies.

Traditional financial institutions usually focus on a single business, while future platform competition will increasingly manifest as ecosystem competition. Therefore, Spark One always insists:

**Platform-based development
, ecological development,
global development,
and long-term development**

By continuously building systems of technology, research, services, and community, a complete Spark ecosystem is gradually formed.

2、 Spark ecosystem architecture

The Spark ecosystem is composed of multiple core components:

Global intelligent asset management platform

Global Wealth Community

Wealth education and growth platform

Points growth system

Digital gold ecosystem

Global partner network

In the future, each sector will form an ecosystem of interconnectivity and collaborative development.

3、 Spark One

Core infrastructure of the Spark ecosystem.

Spark One undertakes core functions such as intelligent asset management, global market research, risk management, wealth growth system, user service system, and platform operation system.

In the future, Spark One will continue to optimize platform capabilities, enhance user experience, and expand global market coverage.

4、 Global Wealth Community

Wealth management is not just asset management, but also cognitive growth and value creation.

Spark Community is committed to building an open, shared, and collaborative global community network to help users:

**Exchange market views
, share growth experiences
, participate in global events
, establish partnerships,
and jointly promote ecosystem development**

In the future, Spark Community will gradually form a global community system covering multiple countries and regions.

5、 Global wealth education platform

Knowledge is an important foundation for wealth management.

Spark Academy will continue to build:

**Wealth management courses,
financial literacy courses,
market research courses, AI technology courses,
global trend courses
, leadership courses**

Helping users improve:

**Cognitive ability,
learning ability,
decision-making ability, growth
ability**

In the future, Spark Academy will become an important talent development center within the Spark ecosystem.

6、 Points ecosystem

To encourage long-term participation in platform development, Spark One has established a Spark Points growth system.

Points can be earned through daily check-ins, platform events, learning and growth, community contribution, and ecosystem participation.

In the future, the points system will be deeply integrated with the ecosystem, forming a long-term growth mechanism.

Spark Points' goals are:

**Encourage participation
, encourage learning
, encourage contribution
, and encourage long-term growth**

7、 Digital gold ecosystem

Gold is one of the most historically valuable assets in the world.

With the development of the digital economy, gold digitization is becoming a new trend.

The Spark Gold program focuses on long-term exploration of digital gold research, gold ecosystem construction, gold culture dissemination, and gold value applications.

In the future, Spark Gold will become one of the key strategic components within the Spark ecosystem.

8、 Global partner system

The future development of wealth management cannot be separated from collaboration.

Spark One will continue to expand:

**Fintech partners,
technology R&D partners,
market research partners,
education partners,
community partners
, brand partners**

Jointly promote ecological construction.

Through open cooperation, we achieve resource sharing and collaborative development.

9、 User value system

The Spark ecosystem aims to create four layers of value for users:

Layer 1: Asset management value

- ; **Layer 2: Knowledge growth value**
- ; **Layer 3: Community collaboration value**
- ; **Layer 4: Ecological participation value**

Through multi-layered value system construction, it helps users achieve long-term growth.

10、 Global Wealth Community Strategy

In the future, Spark One hopes to connect outstanding users from different countries and regions to create:

**Global Wealth Growth Community,
Global Learning Community,
Global Collaboration Community,
Global Innovation Community**

Forming an open, shared, and collaborative global wealth network.

Ecological collaborative development mechanism

The Spark ecosystem segments do not operate independently but form a collaborative development system.

**Spark One (asset management capabilities) ↓ Spark Academy
(growth capabilities) ↓ Spark Community (connectivity capabilities) ↓
Spark Points (incentive capabilities) ↓ Spark Gold (ecosystem
expansion capabilities)**

Jointly promote sustainable ecological development.

11、 Spark ecosystem long-term development strategy

SPARK UNION CAPITAL INC.

Over the next five years, the Spark ecosystem will revolve around

Technological innovation

Wealth management

Educational growth

Global community

Digital gold

Partner network

Six major strategic directions continue to be developed.

Continuously expand ecological scale, enhance ecological vitality, and improve ecological value.

12、 From platform to ecosystem

In the past, competition was about products; today, competition is about platforms; and in the future, competition will be about ecosystems.

A platform with truly long-term vitality not only possesses technical capabilities but also a complete ecosystem.

Spark One hopes to form a future-oriented global intelligent wealth ecosystem by continuously building technology, research, education, community, wealth, and global collaboration ecosystems.

13、 Together, we are building a future wealth ecosystem

Spark One believes that the future of wealth management will not belong

SPARK UNION CAPITAL INC.

to a single institution, but to all long-term value creators.

Every user, every partner, and every community member is an important part of the Spark ecosystem.

In the future, Spark One will continue to adhere to the development philosophy of openness, collaboration, and long-termism, working hand in hand with global users to build a new ecosystem for the era of intelligent wealth.

Connecting value, creating the future.

Chapter 11: Product and Service System

1、 Product philosophy

Spark One always insists on putting user needs at the core, technological innovation as the driver, and long-term value creation as its goal.

The platform not only provides intelligent asset management services but is also committed to building a comprehensive intelligent wealth platform covering research, education, growth, services, and ecosystem development.

In the future era of wealth management, users need more than just an account.

What is needed more is:

Professional research support

Intelligent analysis capabilities

Long-term growth system

Global service capabilities

A secure and stable platform environment

Therefore, Spark One continues to build a complete product and service system. Providing users worldwide with a more professional, efficient, and intelligent service experience.

2、 Spark One APP

The Spark One APP is an important service entry point for the platform and a crucial bridge connecting users to the Spark ecosystem.

SPARK UNION CAPITAL INC.

Users can complete the following through the Spark One app:

Account management

Asset management services

Level Growth System

Global market news

View the research report

Member Center Management

Participate in activities

Community interaction

Points grow

Customer service

In the future, the app will continue to upgrade its functional experience to create a more intelligent and personalized wealth management platform.

3、 User-centered system

The user center is an important part of the Spark One service system. The User Center mainly includes:

Personal account management

Hierarchical management

Growth record

Asset management records

Points management

Notify the center

Security Center

Customer service portal

Helps users manage their personal accounts and growth paths more conveniently.

4、 AI asset management services

AI asset management services are one of Spark One's core service systems. The platform is supported by:

AI technology system

Global research system

Risk management system

Market monitoring system

Forming a complete asset management service capability. Our service philosophy includes:

Research-driven

Risk first

Long-termism

Continuous optimization

Global vision

Helping users better participate in the development opportunities of the intelligent wealth era.

5、 Global market research services

Research capabilities are one of Spark One's key competitive advantages. The platform continuously provides users with:

Global Market Weekly

Global Market Monthly Report

Gold Market Research Report

Digital Asset Research Report

Macroeconomic Watch Report

Industry trend analysis report

Risk Observation Report

Helping users enhance their market awareness and broaden their long-term investment horizon.

6、 AI market analysis services

Spark One continues to build an intelligent analytics system. Via:

Market data analysis

Trend research and analysis

Risk assessment and analysis

Industry research analysis

Global market monitoring

Develop multidimensional analytical capabilities.

In the future, the platform will continuously optimize its analysis system to

improve research efficiency and service quality.

7、 Wealth education services

Wealth growth depends on cognitive growth, and Spark Academy will continue to provide:

Wealth management courses

Market research courses

AI Technology Course

Global Trends Course

Leadership courses

Growth courses

Helping users improve:

Learning ability

Thinking ability

Market awareness

Long-term growth capability

8、 Global customer service system

User service is a crucial foundation for the platform's long-term development, and Spark One has established a global customer service system.

Continuous improvement:

Service efficiency

Service quality

Service experience

User satisfaction

In the future, the platform will continuously improve its global service network to provide users with more professional support.

9、VIP exclusive service system

As the level increases, users will gradually receive higher-level service support. Including:

Dedicated customer service service

Priority response services

Advanced research report services

Exclusive event qualification

High-level membership services

Eligibility to participate in the Global Summit

Brand co-building program eligibility

Build a more complete member service system.

10、Global membership activity system

To enhance user interaction and growth experiences, Spark One continues to host:

Online sharing activities

Market research exchange activities

Wealth Growth Forum

Global community activities

Regional Development Summit

Global Strategy Forum

Promote global user synergy.

11、 Points growth service system

Spark Points is an important part of the platform's growth ecosystem. Users can access the following channels:

Daily sign-in

Learning and growth

Participate in activities

Community interaction

Ecological contribution

Earn growth points. The points system is designed to encourage:

Ongoing engagement

Continuous learning

Continuous growth

Continuously creating value

12、 User security service system

Security has always been a crucial foundation for platform services. Spark One continues to build:

Account security system

Identity authentication system

Risk alert system

Data security system

Emergency service system

Providing users with a safer and more reliable operating environment.

13、 Global cooperative service system

In the future, the platform will continue to expand its global partner network. Including:

Technology partners

Educational partners

Market research partner

Brand partners

Community partners

Strategic partners

Enhance platform service capabilities through open cooperation.

14、 Future product matrix planning

SPARK UNION CAPITAL INC.

In the future, Spark One will gradually form a multi-tiered product matrix. Including:

Intelligent asset management services

Global research services

Wealth education services

Member growth services

Digital gold ecosystem services

Global community services

AI intelligent services

Continuously enriching the platform's product ecosystem.

15、 Product and service development strategy

Spark One believes that the future development of the wealth management industry will require not only technological innovation but also continuously improved service systems. Therefore, The platform will focus on:

Technology

Research

Education

Service

Community

Ecology

Six strategic directions will continue to invest resources to continuously enhance user experience and platform value.

16、 Building a global intelligent wealth service platform

In the future, Spark One hopes to build not just a product, but a complete intelligent wealth service platform. Via:

Spark One APP

Global Research Center

Wealth growth system

Global member community

Digital gold ecosystem

AI technology system

Together, we are building a new model for future wealth management.

Service creates experience, experience creates trust.

Chapter 12: Global Development Roadmap

1、 Strategic development vision

No great enterprise is built overnight. From technological innovation to ecosystem construction, from regional markets to global markets, from product platforms to industrial ecosystems, long-term strategic planning and sustained investment are all required.

Spark One's development goal is not only to build an intelligent asset management platform but also to establish a future-oriented global intelligent wealth ecosystem.

Therefore, the platform has developed a clear development roadmap around it

Technological innovation

Global Presence

Research system

Wealth ecosystem

User growth

Digital gold

Six major strategic directions continue to advance.

1. In 2020, SPARK UNION CAPITAL INC. was established

The company focuses its core strategic directions on artificial intelligence, fintech, asset management, digital economy, and globalization. Key tasks in this phase include:

**Corporate governance system construction
, global development strategy planning
, market research system setup,
technology R&D direction, determination
of international market layout, preparation**

This lays the foundation for the future construction of the Spark One platform.

2. Technology and Research System Construction Phase (2021-2025)

During this phase, the company focuses on:

**AI technology research
, quantitative analysis system research,
global market research,
risk management system construction
, platform infrastructure construction**

Gradually forming a technology center, research center, risk control system, service system, and operational system to prepare for the official launch of Spark One.

3. Spark One Global Launch (2026)

In 2026, Spark One will officially launch to the global market. Key objectives of this phase:

**Completed the launch of the global platform
, established a global user service system
, launched a global market expansion plan
, built a wealth growth system
, and built a global community network**

This marks Spark One's official entry into the global development phase.

4. Global Market Expansion Phase (2027)

The platform began to accelerate its international expansion. Key Construction:

**Global operations network
, regional service center,
global community system,
market research, network
, partner system**

Promote Spark One's entry into more countries and regions, enhancing global market coverage.

5. Digital Gold Ecosystem Construction Phase (2028)

As one of the world's most important strategic assets, gold will play a vital role in future ecosystem development.

In this phase, Spark One will focus on explore:

**Digital gold ecosystem,
gold value application scenarios,
gold culture communication system,
gold research system, and upgrade
the global gold ecosystem cooperation network**

Promote the integration of gold assets with the digital economy.

6. Global Research Center Network Construction Phase (2029)

Research capability determines the platform's future competitiveness. Key construction areas in this phase:

Global Research Center System
: Gold Research Network,
Digital Asset Research Network
, Macroeconomic Research Network, AI Financial Research Network
, Global Market Monitoring Network

Establish a research system covering major global markets.

7. Formation of a Global Intelligent Wealth Ecosystem (2030)

After years of development, Spark One will gradually take shape:

Technology and ecological
research, ecological
education, ecological
community, ecological
wealth,
ecological cooperation

Achieving an upgrade from a single platform to an ecosystem, building an intelligent wealth ecosystem covering global markets.

8. Global Ecosystem Collaborative Development Stage (2031-2035)

In this phase, Spark One will focus on:

Ecosystem coordinated development
: global resource integration
, continuous technological innovation
, enhanced research capabilities,
optimized user services
, and brand internationalization

Continuously enhancing global competitiveness.

2、 2035 strategic goals

By 2035, Spark One hopes to become:

Global intelligent asset management platform

Global Wealth Research Platform

A global wealth growth platform

Global digital gold ecosystem platform

Global intelligent wealth community platform

Through continuous innovation and long-term development, the wealth management industry will be propelled into a new stage of development.

3、 Long-term development strategy

Spark One has always adhered to a long-termist approach. The platform believes that a truly great platform does not pursue short-term growth, but creates long-term value through continuous construction.

Therefore, the platform will continue to invest in:

Technology research and development

Research system

User service

Ecological construction

Global Presence

Continuously consolidating the foundation for long-term development.

4、 Global strategic layout

In the future, Spark One will continue to advance its global development, focusing on:

**North American markets
, European markets,
Asia-Pacific markets, Middle
Eastern markets
, Latin American markets, and
African markets**

Building a global service network to promote global users to participate in the development opportunities of the intelligent wealth era.

5、 From platforms to global ecosystems

Future competition will no longer be competition between individual products, but competition between ecosystems. Spark One's development path:

**Technology platform ↓ Intelligent
asset management platform ↓
Global wealth service platform
↓
Global wealth ecosystem platform ↓
Global intelligent wealth infrastructure**

Gradually achieve strategic upgrades.

6、 Looking to the future

SPARK UNION CAPITAL INC.

In the next decade, artificial intelligence will continue to change the world, the digital economy will keep developing, and the wealth management industry will undergo profound transformation.

Spark One hopes to seize this historic opportunity by leveraging technological innovation, research-driven development, and ecosystem development to build a globally influential intelligent wealth platform.

Step by step, we move forward and create the future together.

Chapter 13: Future Vision

1、 A new era is arriving

The development of human society is essentially a history of constantly breaking boundaries. The agricultural era created civilization, the industrial age created modern society, and the internet era connected the world. Today, artificial intelligence is ushering in a new era.

AI is no longer just a technical tool, but is gradually becoming a key productive force driving social progress.

From healthcare to education, from manufacturing to finance, from scientific research to business innovation, artificial intelligence is reshaping how human society operates.

The wealth management industry is also undergoing profound transformation. Spark One hopes to be a key player in this transformation.

2、 The Future of AI and Wealth Management

In the past, wealth management relied heavily on experience; Today, wealth management is entering a data-driven era; In the future, wealth management will enter an era driven by intelligence.

Future wealth management systems will place greater emphasis on:

**Research capabilities,
data capabilities,
intelligent analysis capabilities,
risk management capabilities,
global resource integration capabilities**

AI will not replace humans; instead, it will become an important partner for humanity, helping people understand markets more efficiently, manage wealth more rationally, and create value over the long term.

Spark One aims to drive the wealth management industry to a new stage through technological innovation.

3、 Wealth management is being redefined

Future wealth management will no longer be limited to simple asset appreciation.

True wealth management will include:

Wealth management
knowledge growth
, risk management
resource integration
, value creation
, social responsibility

The future platform will not only be a platform for asset management but also a platform connecting resources, knowledge, talent, and opportunities.

Spark One hopes to be such a platform.

4、 The future of digital gold

Gold, as one of the most important carriers of value in human history, has undergone thousands of years of development and inheritance.

In the future, as the digital economy develops, the way gold expresses its value will continue to evolve.

Digital technologies will drive:

Promoting the value of gold
, promoting gold culture
, building gold ecology
, and globalizing the circulation of gold

Spark One believes that gold belongs not only to the past, but also to the future.

In the future, the Spark Gold ecosystem will become an important part of the Spark ecosystem.

5、 Global Asset Digitization Trends

Over the next twenty years, the global process of asset digitalization will continue to accelerate, including:

**Digital development of financial assets
, digital commodity assets
, digital knowledge assets
, digital equity assets, digital
economic ecosystem development**

Asset digitalization not only changes asset management but will also transform the global flow of wealth.

Spark One will continue to monitor global trends in asset digitalization and explore more innovative possibilities.

6、 A new global wealth management ecosystem

The future direction of wealth management will gradually upgrade from a single platform model to an ecosystem model.

Competition between platforms will shift into competition between ecosystems.

A platform for future success needs to have:

**Technology and ecological
research, ecological**

**education, ecological
communities, ecological
services,
cooperative ecosystem**

Spark One hopes to continuously build a complete global wealth management ecosystem.

7、 The power of long-termism

Spark One has always adhered to a long-term development philosophy.

The platform believes: truly great undertakings are never created in the short term.

Technology needs time to accumulate, research needs time to settle, brands need time to build, and ecosystems need time to grow.

Therefore, Spark One will stick with it

Long-term construction

Long-term investment

Long-term innovation

Long-term service

Long-term development

Growing together with global users.

8、 From wealth management to wealth civilization

In the future, the development goal of the wealth management industry is not only to help people manage their wealth, but also to help them establish a

correct view of wealth.

Wealth represents not only assets but also responsibility, cognition, capability, and influence.

Spark One aims to promote:

A rational view of wealth

Long-termism

A culture of value creation

Collaborative development philosophy

Helping more people achieve long-term growth.

9、 Building a global intelligent wealth infrastructure

In the next decade, artificial intelligence will become a crucial infrastructure for the digital economy.

Spark One hopes to achieve the following:

**AI technology system,
global research center,
risk management system,
wealth growth system,
global community system
, digital gold ecosystem**

Together, they build a future-oriented intelligent wealth infrastructure, enabling more users to share in the achievements of technological progress and global economic development.

10、 The ultimate vision of Spark One

SPARK UNION CAPITAL INC.

Spark One not only aims to be an outstanding platform but also a key driver of the intelligent wealth era.

Promotion:

**Intelligent wealth management
, research systems, global
service systems, digital
ecosystems, openness,
and long-term value creation**

Helping users worldwide achieve:

**Wealth growth,
cognitive growth
, ability growth
, influence growth**

Build a more open, collaborative, intelligent, and sustainable wealth ecosystem.

11、 Our beliefs

We believe:

**Technology can create value
, research can create cognition
, and cognition can create the future**

We believe:

**Long-termism will ultimately triumph over short-termism
, value creation will eventually surpass value acquisition
, and ecosystem construction will ultimately create a great platform**

We believe:

**The future belongs to those who are willing to keep learning, grow,
and keep creating value.**

SPARK UNION CAPITAL INC.

Written for the future

The future does not come automatically; it needs to be created.

Spark One hopes to join every user, every partner, and every builder in this great transformation of the intelligent era.

Let technology serve value, let wisdom create wealth, and let growth connect the future.

This is not only Spark One's vision for development, but also our expectations for the world of the future.

Intelligence drives value, technology shapes the future

The future begins here.

Appendix A SPARK UNION CAPITAL INC

From innovative concepts to a global intelligent wealth ecosystem

SPARK UNION CAPITAL INC. was established in 2020. From its inception, the company has focused on artificial intelligence, fintech, global asset management, and the digital economy as its core strategic directions.

The founding team believes that the wealth management industry will undergo profound changes in the future, with traditional asset management models gradually evolving toward intelligence, digitalization, and globalization.

Therefore, since its establishment, the company has continuously invested in:

**Artificial intelligence technology research
, global market research,
fintech innovation,
risk management system construction
, global operational layout**

We hope to promote the upgrading of the wealth management industry through the combination of technology and research capabilities.

1. In 2020, SPARK UNION CAPITAL INC. was officially established.

Establishing Development Direction:

**Artificial intelligence
, asset management
, fintech,
digital economy
, globalization development**

Launched a global market research program to establish a corporate governance framework.

2. In 2021, the global research system was established

The company began assembling a research team, focusing on:

**Gold market,
digital asset market
, global macroeconomy,
fintech innovation**

Gradually establish research databases and market analysis systems.

3. In 2022, AI technology system construction was carried out

Initiated research on AI asset management technologies. Key Construction:

**Market analysis model,
risk identification model
, research support system
, data analysis platform**

Promoting the integration of AI and wealth management.

4. 2023 Global Strategic Planning Phase

Continue to advance the internationalization development strategy. Create:

**Global market research network
, partner system,
technology R&D system
, service system**

Forming a global development framework.

5. 2024 Platform Ecosystem Plan

Planning the construction of the Spark ecosystem based on future trends in the wealth management industry.

Initiated design work on **core ecosystem modules such as Spark One, Spark Community, Spark Academy, Spark Points, and Spark Gold.**

6. 2025 Spark One construction phase

Complete platform architecture design, technical system construction, research system construction, risk management system construction, and wealth growth system construction to prepare for global launch.

7. Spark One will be launched globally in 2026

Spark One was officially launched to the global market. The platform has entered the global user service phase, global community building phase, and global ecosystem development stage, opening a new chapter in global intelligent wealth management.

Looking to the future

In the future, SPARK UNION CAPITAL INC. will continue to adhere to technology-driven value, research to create cognition, long-term development, and global collaborative innovation.

Continuously promoting development in artificial intelligence, asset management, digital economy, wealth ecosystem, and global services, it is committed to becoming a key player in the global intelligent wealth management sector and ushering the wealth management industry into a new era.

Appendix B Explanation of the U.S. MSB registration and global compliance framework

1、 Compliance is the foundation for long-term development

Spark One has always believed that technological innovation is just as important as compliance development.

Any long-term international platform needs to establish a sound governance system and compliance framework.

Therefore, SPARK UNION CAPITAL INC. places great emphasis on corporate governance, risk management, and the establishment of global operational standards.

2、 What is MSB?

MSB (Money Services Business) is one of the key registration categories within the regulatory framework of the U.S. Financial Crimes Enforcement Network (FinCEN).

MSB is mainly suitable for:

Monetary service institutions

Payment service institutions

Fund transfer service institutions

Digital asset-related service providers

and other business areas.

After completing MSB registration, companies need to fulfill compliance obligations in accordance with relevant laws and regulations.

3、 Spark One's compliance philosophy

Spark One insists:

Operate legally

Risk management

User protection

Long-term development

Transparent operations

and continuously advancing the construction of a global operational framework.

4、 Corporate governance framework

SPARK UNION CAPITAL INC. Established:

Board of Directors

Strategic Committee

Risk Control Committee

Global Research Center

Technology R&D Center

Operations Management Center

Customer service center

Together, they form a corporate governance system.

5、 Risk management principles

The platform always adheres:

Risk priority principle

Principle of prudent operation

Long-term development principle

User protection principles

Principle of continuous improvement

Integrate risk management concepts into the entire platform construction process.

6、 Global operational framework

With the development of the global market. The platform will continue to monitor:

Laws and regulations of different regions

Industry standards

Risk management requirements

Data security requirements

User service standards

Driving continuous improvement in global operational capabilities.

7、 User Rights Protection Philosophy

Spark One always insists:

User first

Service first

Long-termism

Responsible management

Continuous Optimization:

User service system

Risk management system

Safety management system

Research system

Technical system

Enhance the overall operational capabilities of the platform.

8、 Long-term compliance development strategy

In the future, Spark One will continue to improve:

Governance system

Risk system

Service system

Technical system

SPARK UNION CAPITAL INC.

Research system

Promote the platform's long-term, steady, and sustainable development.

We believe:

A platform with truly long-term vitality.

Not only does it possess advanced technology.

It also has a comprehensive governance system and compliance culture.

Compliance builds trust, and trust drives growth.

Appendix C Global AI Asset Management Industry Research Report

1、 Industry Development Background

The global wealth management industry is undergoing a profound transformation from traditional manual decision-making to intelligent decision-making.

With the development of artificial intelligence, big data, cloud computing, blockchain, and the digital asset market, asset management institutions are gradually upgrading from traditional experience-driven models to data-driven, model-driven, and intelligently decision-assisted models.

AI asset management is becoming an important direction in the development of global fintech.

2、 AI is reshaping the asset management industry

The applications of artificial intelligence in asset management mainly include:

Market data analysis

Trend identification

Risk monitoring

Strategy optimization

Asset allocation assistance

User services are intelligent

Research efficiency improved

Traditional asset management relies on manual research and empirical judgment, whereas AI can process large volumes of market information in a shorter time, improving research efficiency and risk identification capabilities.

In the future, AI will not completely replace professional asset management teams but will become an important technological infrastructure for asset management institutions.

3、 New trends in global wealth management

In the future, the global wealth management industry will show the following trends:

1. Intelligent

AI technology will deeply participate in market research, risk management, and asset allocation processes.

2. Globalization

Investors will place greater emphasis on global asset allocation capabilities.

3. Digitization

Digital assets, digital gold, RWA, and other asset digitalization directions will continue to develop.

4. Custodialization

More users will choose professional and institutionalized asset management services.

5. Ecological

In the future, platform competition will upgrade from single-product competition to ecosystem competition.

4. Dual opportunities in gold and digital assets

Gold has long been an important global store of value.

Against the backdrop of economic volatility, shifting inflation expectations, and heightened geoeconomic uncertainty, gold still holds long-term strategic value.

Meanwhile, digital assets are becoming an important part of the emerging financial system.

Gold represents stable value.

Digital assets represent innovative value.

Spark One focuses on the long-term development potential brought by the combination of the two.

5. Challenges in the AI quantification industry

Although the AI quantitative industry is developing rapidly, there are still some issues in the market:

Severe homogenization

Lack of long-term research capabilities

Overemphasis on short-term gains

Weak risk control system

User education is insufficient

Platform ecosystems are single

Therefore, a platform with truly long-term competitiveness should not rely solely on a single trading model, but should establish a complete system of technology, research, risk control, services, and an ecosystem.

6、 Spark One's industry positioning

Spark One does not aim to be an ordinary AI quantification platform.

Spark One's positioning is:

Global intelligent asset management platform.

The platform is supported by:

AI technology system

Global Research Center

Risk Control Committee

Custodial asset management system

S1-S9 Wealth Growth System

Global ecosystem

Forming differentiated competitiveness.

7、 Assessment of future industry development

Over the next decade, the AI asset management industry will continue to grow.

Platforms with the following capabilities have a better chance of long-term development:

Powerful AI technology capabilities

Long-term market research capabilities

A comprehensive risk management system

Global operational capabilities

User education capabilities

Ecological construction capabilities

Compliance and governance capabilities

Spark One will continue to build long-term around these directions.

8、 Conclusion

AI asset management is not a short-term concept, but an important direction for the long-term upgrade of the wealth management industry.

Future wealth management platforms will need not only technical capabilities, but also research, risk control, service, and ecosystem capabilities.

Spark One hopes to become an important participant in the new era of global intelligent wealth management through long-term construction.

Intelligent empowerment for wealth management.

Appendix D: Description of Spark One Technical Architecture

1、 Spark AI Quant Engine platform serves as the intelligent decision-making hub

Responsibilities:

Data processing

Intelligent analysis

Research assistance

Risk identification

Asset allocation support

2、 AURORA Gold Strategy Research Engine

Responsibilities:

International gold market research

Gold trend analysis

Gold value assessment

3、 TITAN trend analysis engine

Responsibilities:

Market trend identification

Cycle studies

Wave analysis

4、 ORION Risk Control Engine

Responsibilities:

Risk identification

Risk assessment

Risk warning

5、 PHOENIX Strategy Optimization Engine

Responsibilities:

Model optimization

Systematic learning

Strategy upgraded

6、 ATLAS Global Asset Allocation Engine

Responsibilities:

Cross-market research

Asset allocation analysis

Global market collaborative research

7、 Technical architecture design philosophy

Technology-driven

Research-driven

Risk first

Long-termism

Global collaboration

Continuous evolution

Spark One aims to achieve a complete technical architecture system.
Building a future global intelligent wealth management infrastructure.

Appendix E Spark One Product Functional Architecture

Spark One centers on "intelligent asset management," building a complete product function matrix through AI technology, research systems, growth systems, and ecosystem construction.

User Center

The user center is the platform's basic service entry point. Main responsibilities:

1. Account management

Registration management

Login management

Identity authentication

Security settings

2. Personal data management

User information

Grade display

Growth record

Honor record

3. Security Center

Login protection

Risk reminders

Security verification

Account management

Wealth Center

The Wealth Center is the core business module of Spark One. Main responsibilities:

1. Smart asset management

Asset management services

AI management system

Risk control system

2. Wealth growth system

S1-S9 level management

Path of wealth growth

Growth record

3. Revenue management

Asset performance display

Growth bonus display

Tier benefits display

AI Intelligence Center (AI Center)

Core technical service modules of the platform:

Spark AI Quant Engine: an intelligent quantitative analysis engine

AURORA Gold Research Engine

TITAN trend analysis engine

ORION Risk Control Engine

PHOENIX Strategy Optimization Engine

ATLAS Global Asset Allocation Engine

Research Center

Global Research Capability Showcase Center.

Main includes:

1. Gold Research Center

International gold market research

2. Digital Asset Research Center

Digital Economy Research

3. Macroeconomic Research Center

Global Economic Trend Research

4. AI Financial Research Center

Research on FinTech Innovation

5. Global market report

Weekly report

Monthly report

Special reports

Industry research

Growth Center

Core modules of the user growth system.

1. Level Growth System

S1-S9 growth path

2. Wealth growth record

Growth trajectory

Promotion records

Honor record

3. Global membership club

Exclusive services for high-level members

4. Global Ambassador Program

S9 Member Development System

Community Center

Spark Community: A global wealth community. Main includes:

1. Community interaction

Experience sharing

Growth and exchange

Market perspective exchange

2. Global events

Online activities

Regional activities

Global Summit

3. Wealth Forum

Panel discussion

Market research sharing

Points Center

Spark Points growth system. **Source of points:**

Daily sign-in

Learning and growth

Participate in activities

Community interaction

Ecological contribution

Points Usage:

Growth benefits

Member benefits

Participate in activities

Honor system

Service Center

Platform service guarantee system.

1. Customer service

Online customer service

Issue feedback

Work order services

2. VIP services

Dedicated to customer service

Priority service

Premium member support

3. Global service network

Regional service centers

Global user support system

The Spark ecosystem

Spark One is more than just a product. It is also an important infrastructure for a complete ecosystem.

The ecosystem architecture includes:

Spark One

SPARK UNION CAPITAL INC.

Spark Community

Spark Academy

Spark Points

Spark Gold

Global Partner Network

Future product matrix planning

In the next three to five years. Spark One will continue to expand:

Phase One: Upgrade of intelligent asset management services

Phase Two: Building a global research center network

Phase Three: Digital Gold Ecosystem Construction

Phase Four: Building a Global Wealth Community

Phase Five: Formation of a Global Intelligent Wealth Ecosystem

Product architecture design philosophy

Technology-driven

Research-driven

Risk first

SPARK UNION CAPITAL INC.

Long-term growth

Global collaboration

Appendix F explains the global market layout plan

Global strategic vision

1. Phase One: North American Market

Strategic Positioning: Global Operations and Innovation Center

Key Directions:

AI technology research and development, global strategic management, international cooperation, and expanding wealth management innovation

The North American market will become one of the core strategic pillars for Spark One's global development.

2. Phase Two: The European Market

Strategic Positioning: Global Research and Brand Building Center

Key Directions:

Market research, fintech cooperation, global brand influence building, international resource integration

Key Coverage:

United Kingdom
, Germany
, France
, Switzerland,
Netherlands

and other major economies.

3. Phase Three: Asia-Pacific Market

Strategic positioning: Global user growth center

Key Directions:

User services
, community building,
market promotion
, and ecosystem development

Key Coverage:

Singapore
, China, Hong Kong
, Japan
, South Korea
, Malaysia,
Thailand
, Vietnam,
Indonesia,
Philippines

and other markets.

4. Phase Four: Middle East Market

Strategic positioning: Global capital cooperation center

Key Directions:

Wealth management cooperation
, digital economy cooperation
, strategic resource cooperation,
ecosystem construction cooperation

Key Coverage:

UAE
, Saudi Arabia,
Qatar,
Bahrain
, Kuwait

and other regions.

5. Phase Five: Latin American Market

Strategic Positioning: Growth Hub in Emerging Markets

Key Directions:

Market expansion
, community development
, user growth,
digital economy cooperation

Key Coverage:

Brazil
, Mexico,

Argentina
, Chile,
Colombia

and other markets.

6. Phase Six: The African Market

Strategic positioning: Long-term strategic market development

Key Directions:

Digital economy development,
financial technology, wealth education,
and community
ecosystem construction

Key Coverage:

South Africa
, Kenya,
Nigeria
, Egypt,
Morocco

and other countries.

Global research center layout

In the future, Spark One plans to establish:

North American Research Center

European Research Center

Asia-Pacific Research Center

Middle East Research Center

Latin American Research Center

Global AI Financial Research Center

Establishing a research network covering major global markets.

Global community layout

In the future, Spark Community will gradually be established:

Global member community

Regional Development Center

City-level community nodes

Global Ambassador Network

Promoting collaborative development within the global wealth community.

Global ecological development goals

By 2030, Spark One hopes to form:

Global service network

Global Research Network

Global community network

Global partner network

Global Wealth Ecosystem Network

SPARK UNION CAPITAL INC.

Building a truly global intelligent wealth ecosystem.

Global vision, global opportunities.

Appendix G Brand Visual System and Logo Definition

Brand name definition

1. SPARK

Meaning:

Sparks

Inspiration

Innovation

Hope

The future

Symbolizing the infinite possibilities brought by technological innovation.

2. UNION

Meaning:

United

Collaboration

Connection

Co-creation

It symbolizes the coordinated development of global resources.

3. CAPITAL

| Innovation | Responsibility | Growth | Openness | Collaboration |

SPARK UNION CAPITAL INC.

Meaning:

Capital

Value

Growth

Wealth

Symbolizes wealth management and value creation.

Therefore:

SPARK UNION CAPITAL

Meaning:

Connecting global wisdom and capital power to jointly create future value.

The meaning of the name Spark One

The "One" in Spark One stands for:

First

The only one

Unified

The future

Starting point

Symbol: **A new beginning in the era of intelligent wealth.**

Core brand values

Technology-driven value

Research creates cognition

Long-termism develops

Global collaborative innovation

Continuous value creation

Brand spirit

Innovation

Responsibility

Growth

Open

Collaboration

Brand slogan

Wisdom drives valueTechnology shapes the future

The future begins here

Brand visual philosophy

The Spark One brand visual is based on:

| Innovation | Responsibility | Growth | Openness | Collaboration |

SPARK UNION CAPITAL INC.

Tech blue, wealth gold, future silver

as the core visual language.

Symbol:

Technology, wealth, trust, future, growth

Forming a brand image system with international characteristics.

Appendix H Spark One Core Glossary

Chinese	English	Brief explanation
Artificial intelligence	AI-Artificial Intelligence	One of the core technology directions
Asset management	Asset Management	Core business of the platform
Quantitative analysis	Quantitative Analysis	Research and decision-making foundations
Global Research Center	Global Research Center	Core institutions of the research system
Spark intelligent quantitative engine	Spark AI Quant Engine	AI is the core engine for quantitative decision-making
Gold strategy research engine	AURORA	Research direction in the gold market

Trend analysis engine	TITAN	Market trend analysis
Risk control engine	ORION	Risk identification and management
Strategy optimization engine	PHOENIX	Investment strategies continue to be optimized
Global asset allocation engine	ATLAS	Global asset allocation support
Global Wealth Community	Spark Community	User connection and collaboration platform
Wealth education platform	Spark Academy	A platform for knowledge and growth
Points growth system	Spark Points	User incentive and growth mechanisms
Digital gold ecosystem	Spark Gold	The gold digital ecosystem sector

Wealth growth grading system	S1-S9	User level promotion system
Directly promote the contribution award	Direct Contribution Award	Direct referral rewards
and occasionally awarded a contribution award	Indirect Contribution Award	Indirect referral rewards
Team Contribution Award	Team Contribution Award	Team growth rewards
Management Performance Award	Management Performance Award	Manage contribution rewards
Dynamic grading evaluation mechanism	Dynamic Qualification Review System	Leveling and adjustment mechanisms
Honorary Leader	Global Ambassador	S9 highest rank identity

Appendix I Disclaimer and Risk Warning

1、 Important statement

This white paper is intended solely to introduce the development philosophy, technical architecture, ecosystem planning, and future strategy of SPARK UNION CAPITAL INC. and the Spark One platform.

The content of this white paper does not constitute any form:

Investment advice

Legal advice

Tax advice

Financial advice

Return commitment

Warranty Statement

Users should make independent judgments based on their own circumstances.

2、 Forward-Looking statements

The future planning, development goals, strategic directions, and ecosystem construction mentioned in this white paper are forward-looking descriptions.

Future actual development may be affected by:

Market environment

Technological development

Policy changes

Industry changes

International environment

Force majeure factors

and other factors.

The platform does not guarantee that future plans will be implemented according to the contents of this white paper.

3、 Risk warning

Any asset management activity carries risks.

Including but not limited to:

Market risk

Liquidity risk

Technical risks

Policy risks

Systemic risk

Unforeseen risks

Users should fully understand the associated risks.

and participate reasonably according to their own risk tolerance.

4、 Intellectual property statement

This white paper covers:

Brand name

LOGO

Technical architecture

Content design

Research achievements

All are owned by SPARK UNION CAPITAL INC.

Without authorization.

No organization or individual may copy, reproduce, modify, or use for commercial purposes.

5、 Final interpretation right

The final interpretation right of this white paper belongs to:
